

INGREDIENTS & USAGE

Suggested Use: Take 1–4 pumps by mouth, holding for 30 seconds before swallowing. Best taken on an empty stomach 10 minutes before meals. May be stirred into a small amount of water. Once opened, use within 60 days. Store at room temperature, away from light.

NanoEnhanced Hemp Oil is the industry-leading phospholipid encapsulation system - providing rapid uptake and unparalleled bioavailability.

Other Ingredients: Sustainably & naturally grown hemp. Water, Glycerin, Phospholipids from sunflower seed oil, Ethanol, Vitamin E (as Tocopherol and natural mixed tocopherols), Natural Citrus Oils.

Proprietary Formula

Lab Tested

Doctor Approved

Certificate of Analysis

GMO Free

Gluten Free

FDA cGMP

Our NanoEnhanced Hemp Oil is made with the highest quality hemp strains grown to strict organic standards that we can find. We use a super-critical whole plant extraction process that yields all of the synergistic cannabinoids, terpenoids and other natural compounds of the original plant. Our Hemp Oil is non-psychoactive and safe for daily consumption.

Is our hemp oil legal?

Yes, our product is an imported industrial hemp (from Europe) specifically cultivated for consumer use, and complies with federal regulation for distribution in the US and abroad. Our hemp oil is about 100 x's below the federal limit of 0.3% THC at 0.02 to 0.03% concentration.

What part of the hemp plant is used?

We use all parts of the hemp plant to produce its hemp oil. Is it essentially a full hemp plant extract with most synergistic components left intact.

Do we use nanotechnology?

The formation of our extract produces particle sizes below 100nm, which some people would call nanotech just because of the size. These lipid particles are very similar to particles the body makes, called chylomicrons, to move triglycerides; these natural particles are in the 50-200nm ranges.

How do we process the hemp into an oil?

Through a super critical (high pressure) CO2 extraction process.

What gets taken out?

1. Terpenoids? Some remain and some are lost.
 2. Other cannabinoids? What remains is a natural spread of plant cannabinoids
- Pollutants? We purify the oil we get from our European source to remove any contaminants.

Are there any microbial counts / bacteria / microbes?

Microbe counts are all nil in the incoming material and the same on the outgoing – each batch of outgoing is tested for metals and microbes.

Are all the synergistic compounds left in tact?

Most of them, with no change in molecular structure.

What is the purpose of phosphatidylcholine?

It is the emulsifier used to stabilize the small oil droplets and it is highly beneficial nutrient that is a choline source and beneficial for cell membrane, liver and brain function.

When NanoEnhanced, how much does this increase the dosage by?

The dosage is 300mg per 1.7 oz bottle. Unpublished third party studies indicate a 6X increase in system uptake through our intra-oral delivery system.

Will I fail a drug screening?

Most work-place drug screens and tests target delta9-tetrahydrocannabinol (THC) and do not detect the presence of Cannabidiols or other legal natural hemp based constituents. However, studies have shown that eating hemp foods and oils can cause confirmed positive results when screening urine and blood specimens. Accordingly, if you are subject to any form of drug testing or screening, we recommend (as does the United States Armed Services) that you DO-NOT ingest this product. Prior to consuming these products consult with your healthcare practitioner, drug screening testing company or employer.

Is our Hemp Oil THC free?

It is not THC-free. It is substantially below federal legal limits.
